FOREWORD

Full year 1977 daily aircraft operations were obtained from 426 towered airports (424 operated by the Federal Aviation Administration (FAA). Six different types of daily operations were reported by these airports on the FAA Form 7230.1, Airport Traffic Record:

- (1) Air Carrier itinerant
- (2) Air Taxi itinerant
- (3) General Aviation itinerant
- (4) Military itinerant
- (5) General Aviation (Civil) local
- (6) Military local

Technology, Inc. (ADTECH) under Contract No. DOT-FA78WA-4151. The main objectives of this contract were to further develop a package of computer programs to perform on-line computer statistical analyses on the daily tower data and to prepare the material used in this report. The report provides a convenient public document for summary reference and the data it contains are used by planning personnel in the FAA, other government units, and external sources for airport

studies that require such background information for forecasting, capacity, and environmental analyses. Within the
FAA, the computerized daily tower activity statistics are
utilized as basic input for forecast models, airport planning,
and for facility planning of the air traffic control system.

For this report, the output of the computer programs displays specific statistics in tabular and graphical format. The tabular statistics include means, standard deviations and peak occurrences computed for individual airports as well as various multiple airport groupings. Frequency distribution histograms and time curves are presented in a graphical format for the entire nationwide set of airports.

Three FAA towered airports commissioned during the year 1977 were not included in this report because a full year of activity information was not available. These airports were:

| | Airport | State | Month Commissioned in 1977 |
|-----|----------------------------|----------------|-------------------------------|
| (1) | Martha's Vingyard | Massachusetts | June |
| (2) | Fairfield | New Jersey | July |
| (3) | Pago Pago International | American Samoa | September |

Two towers, Grand Canyon Municipal, Arizona, which was tower operated only eight months during the year, and Deadhorse, Alaska, which was decommissioned in September 1976, were not

included in this report. The two non-FAA towered airports included were Falmouth, Massachusetts and Suffolk County, New York.

A complete list of the 426 airports included in this report is presented in an Airport Location Directory beginning on page vi.

- The airports are identified as being in top 50 on the basis of total operations in CY 1977.
- Air traffic hubs are not airports; they are the cities and Standard Metropolitan Statistical Areas (SMSAs) requiring aviation services. Individual communities fall into four hub classes as determined by each community's percentage of the total enplaned revenue passengers in all services and all operations of U.S. certificated route air carriers in the 50 states, the District of Columbia, and other U.S. area designated by the FAA. Classifications in this publication, based on 215,335,045 enplanements for the 12 months ending December 31, 1976, are:

| Hub Classification | Percent of Total Enplaned Passengers | Number of Enplaned Passengers |
|-----------------------|---|----------------------------------|
| Large (L) | 1.00 or more | 2,153,350 or more |
| Medium (M) | 0.25 to 0.99 | 538,338 to 2,153,349 |
| Small (S) | 0.05 to 0.24 | 107,668 to 538,337 |
| Nonhub (N) | less than 0.05 | less than 107,668 |

SECTION I

SINGLE AIRPORT ACTIVITY STATISTICS

For each of the nine categories of operations for the 426 airports basic descriptive statistics were computed. These were: means, standard deviations, and peaks for daily, weekly, and monthly operations at each airport. Along with these statistics, quarterly and annual totals were also computed. The numerical values were all rounded off to the nearest integer and the special symbol "*" where shown, indicates that peak to average ratios would not be meaningful and were not computed.

SECTION II

AVERAGE AIRPORT ACTIVITY STATISTICS

The data incorporated in the single airport activity statistics for formed the data base needed to compute average statistics for various groupings of airports. Similar descriptive statistics were computed for groups of airports as were computed for single airports. Instead of quarterly and annual totals, quarterly and annual means and standard deviations were computed. The peak airports were identified for daily, weekly, and monthly operations.

The composition of $71\frac{1}{2}$ specific groupings of airports presented in the CY 1977 Tower Airport Statistics Handbook is as follows:

- (1) USA (426 airports)
- (2) REGIONS (11 categories of 426 airports)
- (3) STATES (50 states; 3 territories--Puerto Rico, Wake Island, $\frac{1}{2}$ and Virgin Islands, District of Columbia) $\frac{1}{2}$
- (4) Top 50 airports (most operations)
- (5) Large HUB airports (92 airports)
- (6) Medium HUB airports (58 airports)
- (7) Small HUB airports (105 airports)
- (8) Non-HUB airports (171 airports)

For airport groups listed below, <u>Average</u> Airport Activity Statistics does not meaningfully apply because these groups contain only one airport. Tables for these "groups" were deleted from Section II. The reader can refer to Section I for the related statistics.

| Airport Groups | Section II Table Numbers Deleted | Section I Table Numbers Reference |
|----------------------|----------------------------------|---|
| Delaware | 2-20 | 1-23 |
| Rhode Island | 2-51 | 1-21 |
| Vermont | 2-57 | 1-22 |
| District of Columbia | 2-63 | 1-74 |
| Wake Island | 2-66 | 1-426 |

SECTION III

AVERAGE DAILY OPERATIONS

The average daily operations reflect averages and standard deviations for each day of the week for the 426 airports. These statistics were computed for all the nine categories of operations. However, only general aviation itinerant and local activity are given in Section III along with daily average for total operations. Other categories are available on request. Each airport in Tables 3-3, 3-6, and 3-9 is identified by its region, state, location, and the airport location identifier code.

SECTION IV

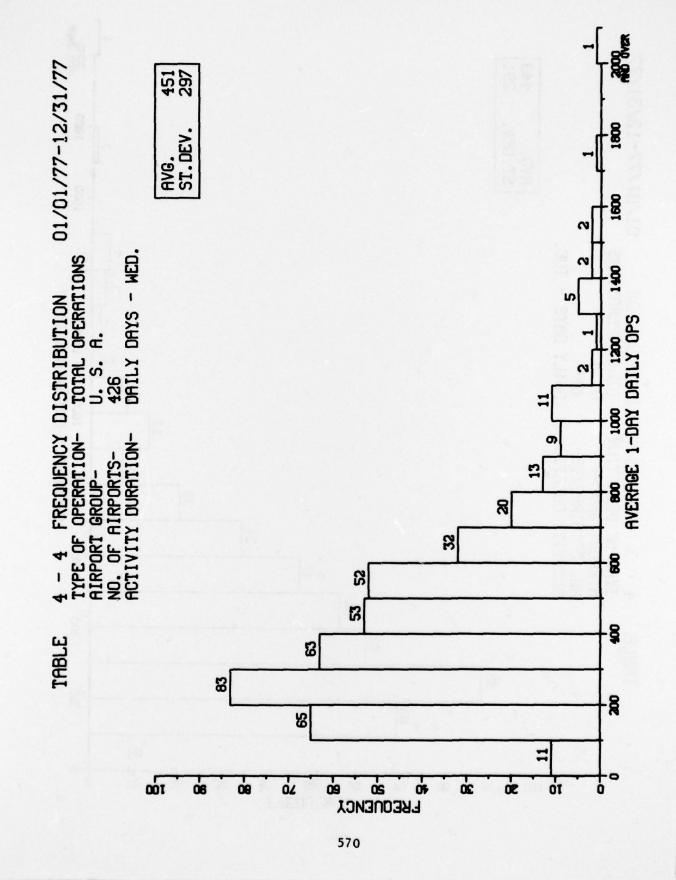

FREQUENCY DISTRIBUTION HISTOGRAMS

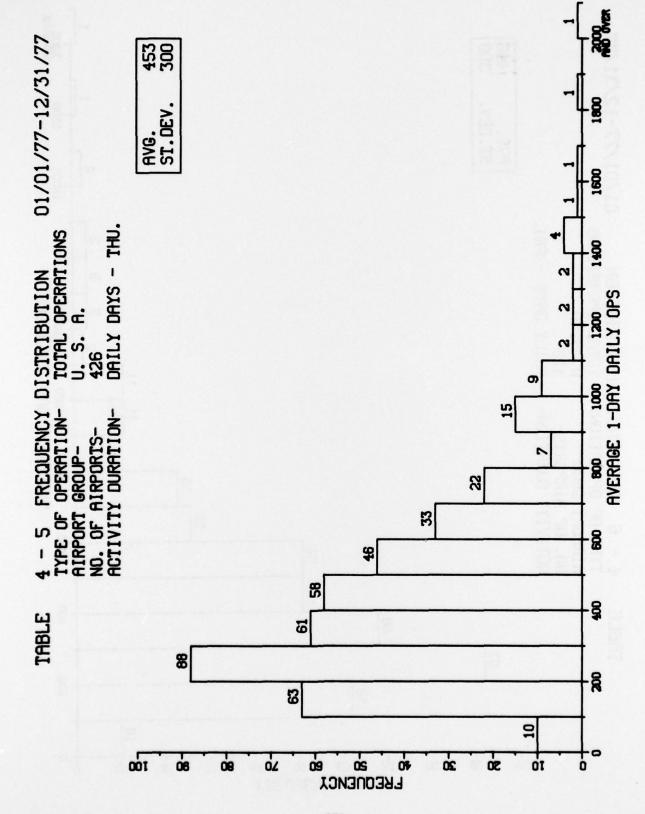

The frequency distribution histograms are presented for total daily operations by day of week for the 426 airports. Each histogram identifies the average as well as the standard deviation for the day under consideration. In addition, the number of airports in a specific interval is also printed.

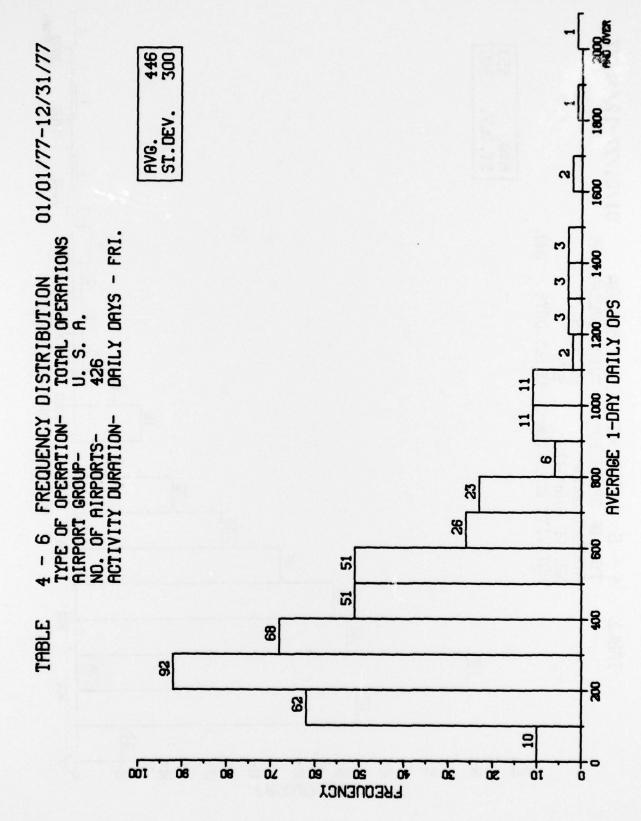

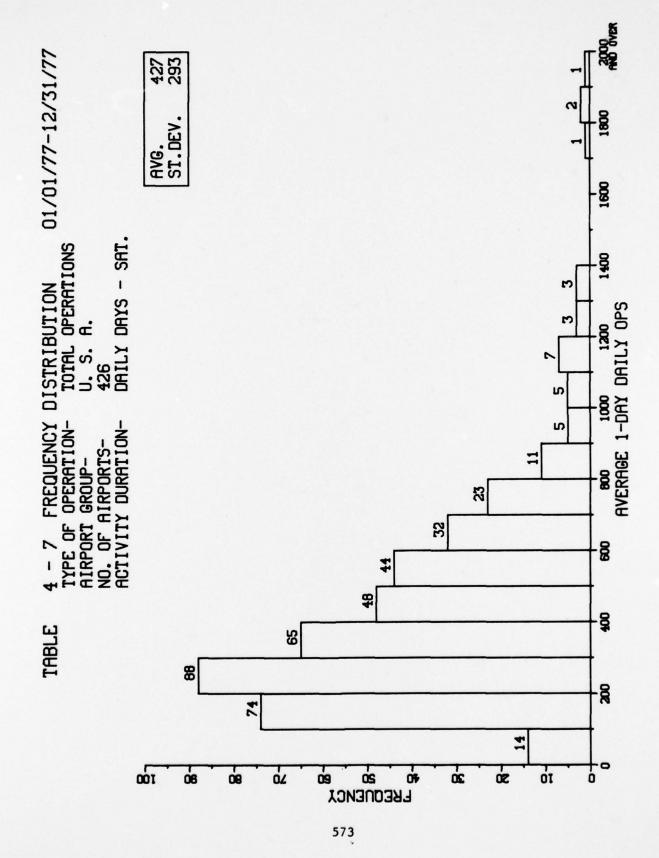

SECTION V

ANNUAL DISTRIBUTION OF AIRPORT ACTIVITY

Average weekly operations for the 426 airports for each week of the year 1977 by nine types of operations are presented in the following line charts.
